Dear Clearaudio-customer,

You have purchased a state-of-the-art turntable, the Performance DC, a world class product of Clearaudio electronic GmbH. Congratulations on your purchase!

The main chassis consists of a complex sandwich of materials: aluminium and HDF material. The powerful and smooth-running DC motor is integrated within and is effectively decoupled by the main chassis.

The motor is hidden beneath the platter and drives the precision machined aluminium sub-platter via a precision machined POM main platter are supported by Clearaudio’s patented CMB Ceramic Magnetic Bearing'.

The drive system is operated by four blue illuminated buttons, ergonomically integrated into the front left of the chassis.

Almost any commercially available 9 inch tonearm can be fitted by virtue of the easily interchangeable armboards.

Please read this user manual carefully so that you can enjoy all the advantages of your Performance DC-turntable. All information given will help to generate the best performance and avoid any possible damages.

We hope you will enjoy your new Clearaudio Performance DC-turntable.

1. Packaging overview

The Clearaudio Performance DC-turntable is delivered in specially designed custom packaging.

Please check the contents according to the following list before you set up your new Clearaudio Performance DC-turntable.

1. Layer (top):

Top of bearing, belt, fittings and accessories (Quality and warranty card, bearing oil, hex keys) sub-platter, power supply

If ordered as set:
tonearm and/or pickup

2. Layer (middle):

Turntable - chassis

3. Layer (bottom):

Platter

IMPORTANT NOTICE: Please double check the tightness of all bolts and armboard mounting hardware, as temperature fluctuations during transit may have caused the hardware to become loose.
2. Set-up and operation

The *Performance DC*-turntable consists of several components, as described in No 1 (Packing overview).
The set up is easy, as some of the components are pre-assembled at the factory.
Please make use of the white gloves enclosed in order to avoid scratches or unwanted fingerprints (e.g. on the platter).

Please follow the instructions step by step:

The *Performance DC* requires a space of at least 16.54 inch x 12.99 inch for positioning.

*Pic. 1: Setting up space*
2.1

Place the pre-mounted chassis on your hifi-rack or another suitable surface.

![Pic. 2: Performance DC chassis](image)

2.2

To avoid hum noises it can be necessary to ground the bearing. For that please plug in the provided ground cable into the hole of the screw from the bearing at the bottom side of the turntable.

![Pic. 3: Grounding the bearing of the Performance DC](image)

2.3

Please remove the protective netting from the bearing shaft and place two drops of the synthetic bearing oil on the ceramic bearing shaft. Slip the bearing top onto the bearing shaft of the turntable.

![Pic. 4: Bearing oil](image)
2.4
Now you can set the bearing upper part carefully onto the bearing. To avoid damages make sure you slide the bearing upper part slowly and carefully on the polished ceramic shaft.

2.5
Now you can set the sub-platter carefully onto the bearing. To avoid any damage, make sure you slide the sub-platter slowly and carefully onto the bearing. After that, take the included belt and place it around the motor and the sub-platter. At this point the sub-platter will be higher than the pulley. This is normal, as the CMB requires the weight of the platter to fully engage it.

2.6

Now you can set the platter carefully onto the bearing. To avoid damage, make sure you slide the platter slowly and cautiously on the sub-platter/ bearing assembly. Hold the platter securely, so the platter does not slip or fall on your turntable.

2.7

Please check with the bubble level gauge, if your Performance DC turntable is in a level position.

You can adjust each of the turntable’s feet to get the turntable level. Only if the turntable is in a level position will you get the best results with your turntable.

Adjust the height by turning the feet.

2.8

For tonearm and cartridge mounting please refer to the user manual of the respective manufacturer.
Now you can connect the Performance DC turntable with the main supply.

![Connection to the main supply](image9.jpg)

2.9 Speed fine adjustment

As the motor adjustment is already pre-set at the factory, you don’t have to check the speed before using the turntable for the first time.

If you want to check the speed of your turntable by yourself over the time, we recommend to use a Stroboscope Testrecord.
To adjust the speed so perfectly and precisely as possible, we recommend the Clearaudio Stroboscope Testrecord (AC038) and the Clearaudio “Speed Light” (AC039) (both available at [www.anlogshop.de](http://www.anlogshop.de))

On the backside (close to the power supply input) of your turntable there are three setting trimmers:

- left trimmer = setting 45 rpm (near power supply jack)
- right trimmer = setting 78 rpm
- 33 1/3 RPM is underneath the motor

![Speed fine adjustment](image10.jpg)

Now you are finally ready to play your vinyl records!

**Attention:**

If the turntable is not in use, disconnect the unit completely from the power supply by removing the main plug from the socket.

We wish you a lot of pleasure with your new Performance DC turntable.
3. Service

If any service or repair on all Clearaudio products is necessary, please contact your dealer / distributor or contact Clearaudio directly. We can inform you about your nearest service location.

Transportation advice:
If any transportation of the Performance DC-turntable should be necessary, please always remove the turntable platter. Otherwise serious damage can occur!
The bearing hole needs to be covered as well, to avoid any dust coming into the bearing. Always take of the pulley of the motor unit as well, to prevent the motor shaft from any damages.

PLEASE RETAIN ALL ORIGINAL PACKAGING. You will need it if this unit has to be transported and/or shipped. Any further questions you may have about this turntable should be directed to the distributor or directly to Clearaudio at

4. Special directions

The Clearaudio Performance DC does not require extensive maintenance.

If the Performance DC turntable is not in use for a long period of time, please disconnect the wall wart supply from the mains supply.

Every year, or if you notice speed variations, you can lubricate the bearing of the turntable platter with the supplied oil. Please use 1 to 2 drops of the oil onto the bearing shaft.

For a new that turntable has recently been shipped, has been un-used for a significant period of time, or has recently been shipped or transported to a different environment, it is advisable to double-check and re-tighten all chassis and armboard bolts on the underside of the turntable. Due to the various materials used in the turntable plinth that can expand or contract at different rates as a result of temperature and humidity changes, these bolts may become loose and need to be re-tightened.

Don’t use harsh cleaning fluids for the Performance DC turntable. A few drops of window cleaner diluted in water is recommended. Dry all cleaned parts with a fine cotton cloth carefully. Under no circumstances should spirit or alcohol based fluids be used, as this could cause surface damage!

Please take care not to damage the power cord. Any damage should be repaired by authorized personnel only. A damaged power cord must be exchanged immediately!

To achieve the full Clearaudio warranty, it is necessary that you fill out and send your warranty card to Clearaudio within 14 days after purchase. Only if the product is returned in its original packing can warranty service be provided.

Transportation advice:
If any transportation of the Performance DC-turntable should be necessary, please always remove the turntable platter. Otherwise serious damage can occur!
The bearing hole needs to be covered as well, to avoid dust entering into the bearing. Always take off the pulley of the motor unit as well, to prevent the motor shaft from being damaged.
